Color Your Design

ALPHA POINT

DUO-GARD
FORGE AHEAD.

NEW DESIGN TOOL CREATES ENDLESS POSSIBILITIES

Bold color, translucency and fluid shapes of resins in exterior applications can tell a powerful narrative, create an inviting experience, broadcast a brand message or preview interior design.

Fusion is a modern design tool allowing you to go beyond the limitations of traditional architectural materials. Impact resistance, UV stability and proven performance make these powerhouse polymers a natural choice when classic materials restrict design possibilities and application opportunities.

EXPERTISE AND CAPABILITIES

DESIGN

The objective of our design team is to show you how to achieve your design goals in aesthetics, performance and economy. With this creative collaboration, our team reduces your costs while enhancing the performance and achieving the aesthetics so critical to your design.

ENGINEER

At Duo-Gard, we alert you to glazing, framing and design alternatives you may not even be aware of – alternatives that save money, enhance aesthetics and raise performance levels – all without compromising the integrity of your design. We want to ensure that you don't pay for features you don't need or want.

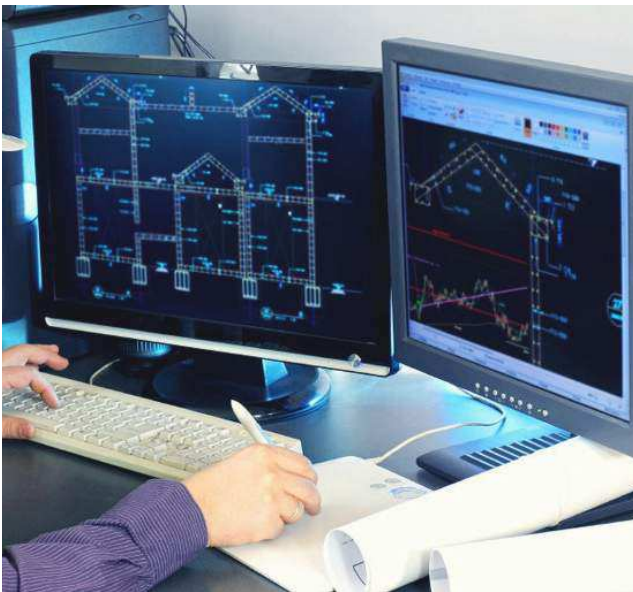

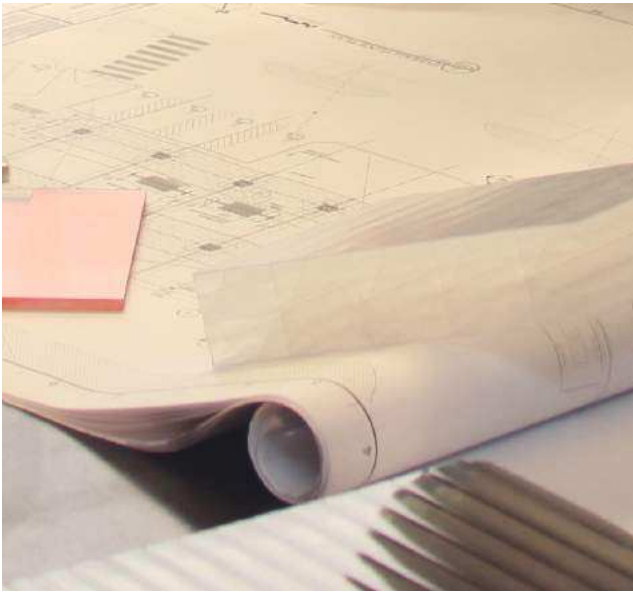

Staff engineers at Duo-Gard are integral members of the Design Team for all our products – whether you want skylights or shelters – starting with the initial review.

FABRICATION

The designer's dream becomes reality in the shop. We take steps to make sure it does in our multiple manufacturing locations within Michigan. All of our production specialists are specifically trained in the intricacies of working effectively with all our materials. Creating technical synergies, we make sure that all material works in unison to produce an efficient and effective design.

FUSION ADVANTAGE

- Ideal for performance-driven exterior applications
- Product options create unlimited design potential
- Appropriate for multiple uses
- Multiple options for light levels, diffusion levels and visibility levels
- Extremely durable
- Polycarbonate advantages include:
 - Self-extinguishing
 - Easy to work with and install
 - Durability
 - Low maintenance cost
 - Extraordinary impact strength

Duo-Gard together with 3form

Performance. Aesthetics. Economy. Architects and designers gain new advantages in all three with a collaboration announced by two industry leaders in glazing materials and systems technology. Duo-Gard Industries Inc. will provide complete turnkey systems and solutions for canopies, shelters, building facades and other exterior applications.

A new line, marketed by Duo-Gard, is named Fusion and integrates 3form translucent polycarbonate glazing panels with Duo-Gard's engineered structural systems to create advanced aesthetic possibilities in **102 color options, three finishes and three thicknesses.**

The collaboration takes Duo-Gard's expertise in outdoor applications to a higher level of aesthetic diversity, while it moves 3form into new exterior territory, expanding the markets for both companies.
