

Project: San Diego Gas & Electric
Location: San Diego, CA

Retrofitting existing commercial buildings for energy efficiency is one of the greatest opportunities facing the building industry. 80% of today's commercial square footage will be standing and operating in 2030; 65% will be in place in 2050.

The Rocky Mountain Institute

Retrofit – Replace – Revive

Using Duo-Gard's **Focused Design** approach, our experts help contractors and building owners revitalize old, dilapidated, inefficient glazing with high-performance translucent systems for canopies, curtain walls, skylights and more. Are you considering replacement or overglazing for existing openings? We'll help you evaluate the costs and benefits of each, then recommend the **best solution** based on your goals. We'll raise performance, reduce costs and eliminate waste. That's the **Duo-Gard Difference** since 1984.

Benefits

- Advanced polycarbonate technology
- Shatterproof – 200 times stronger than glass
- Four times more energy efficient than glass
- High-quality diffused light transmission
- Easy installation for reduced costs
- Options for automated opening systems
- Single Source Warranty. Work performed by certified/experienced installation crews

RETROFIT - REPLACE - REVIVE.

CANOPIES

- Update building entry aesthetics.
- Brighten entrance with light diffusing glazing.
- Utilize existing structure to reduce cost.

WALLS

- Improve building fenestration performance.
- Reduce lighting costs with diffused daylighting.
- Superior warranties than traditional glass systems.

SKYLIGHTS

- Dry-glazed systems eliminate leaks.
- High-impact glazing.
- Eliminate glare and heat gain with diffused daylight.
